

Seminar II

This highly informative and practical programmable logic controllers (PLCs) seminar had been carefully crafted to enhance the understanding and skills of students as a part of Industrial Automation Course (B.Eng. Electrical Engineering), Process Dynamics and Control Course (B.Eng. Chemical Engineering), and Instrumentation in Chemical Process Course (M.Eng. Chemical Engineering).

Electrical Engineering and Chemical Engineering students had the opportunity to explore the fascinating history of programmable logic controllers (PLCs), gaining invaluable insights into their evolution and significance within the realm of industrial automation. By understanding the historical context, they would develop an appreciation for the rapid advancements in PLC technology, which paved the way for the cutting-edge solutions found in Industry 4.0.
